

Wireless Headset

VOCOVO headsets offer simple to use wireless **Team Communications**, with crystal clear audio enabling your teams to communicate instantly across the widest areas.

Built around proven DECT digital technology, communications between staff members is simple and intuitive. Forget crackling walkie-talkies, poor voice quality, and barged in conversations. With VOCOVO conferenced technology, colleagues are free to concentrate on the task, not the tool.

The robust headset has been ergonomically designed with detachable wearing styles. The padded earpiece and lightweight construction make it both flexible and comfortable to wear, essential for a headset with up to 48-hour battery life.

Integrating with the range of VOCOVO input devices, the wireless headset relays audio messages generated at CallPoints and at the checkout via Keypads or any imaginable input source (temperature sensors, footfall counters, etc.).

With **telephony integration** VOCOVO headset users are now able to answer incoming customer calls and make outgoing telephone calls to a set of numbers.

Advanced features of the VOCOVO Headset include inbuilt Voice Prompts to take the guesswork out of using a headset. **OpenMic** feature for hands free full duplex speech. Extensive menu options to enable **advanced telephony** integration (Speed Dial, Conference Switch/Merge, Callbacks, CallForward, etc.).

Key Features

- New lightweight & robust design
- DECT digital voice encoding means crystal clear audio.
- Large Push-to-Talk button
